

Meeting of the staff of the chair of Physics with foreign scientists

On December 11, 2018, a scientific seminar was held at the chair of Physics on the topic: «Modern research in materials science at institutes at the Latvian Academy of Sciences». Dr. Andrei Krasnikov, professor, will make a report. The report aroused great interest among the participants of the seminar, was highly appreciated by the audience, many questions were asked.

In the decision taken at the end of the seminar, it was emphasized that the content of the report reflects the traditions of leading scientific schools and universities in the field of materials science. The positive dynamics of the development of domestic materials science research schools and the growth of their recognition, the relevance of basic and applied research performed by young scientists and specialists of the Republic of Kazakhstan, the relevance of the topic to «Strategic directions for the development of materials and technologies for their processing for the period up to 2030» were noted.
